PROFESSIONAL SUMMARY

Software Engineer with nearly 2 years of experience developing scalable, data-intensive systems and real-time applications. Strong expertise in backend engineering with a focus on API design, real-time systems, and event-driven architecture using Node.js, Kafka, and Redis, combined with hands-on experience in React-based frontend development. Proven ability to design high-performance systems and deliver production-grade applications.

EDUCATION

Bachelor of Engineering, Computer Science

Savitribai Phule Pune University, Pune.

May 2021

CGPA: 9.3/10

EXPERIENCE

Software Engineer

Uptycs India Pvt. Ltd.

Jul 2021 – Nov 2022

Pune

- Designed and deployed a **scalable backend** for the **Offline Asset Tracker**, improving asset visibility and system performance by 25% through configurable dashboards, alerts, and notifications
- Built real-time data streaming solutions using **Kafka** and **WebSockets**, reducing system latency by 30% and enabling efficient live data processing
- Developed a telemetry data pipeline using **optimized SQL queries (Presto)** and **MongoDB**, automated via **Airflow DAGs**, reducing manual intervention by 80%
- Created automated baseline scripts and implemented **Jenkins** pipelines with **Docker** for containerized deployment, reducing deployment time by 50%
- Implemented **unit**, **load**, and **integration tests** following test-driven development practices to ensure system reliability

Software Engineer Intern

Uptycs India Pvt. Ltd.

Apr 2021 – Jul 2021

Pune

- Developed data processing scripts using **Redis** and **PostgreSQL** to generate user-level analytics, improving data-driven decision-making by 40%
- Developed **REST APIs** using **JavaScript**, **Node.js** and **Express.js**. Performed API testing in **Postman**, resulting in 30% reduction in bug report and data retrieval times by 50%.

TECHNICAL SKILLS

Programming Languages: JavaScript, TypeScript, Python

Backend: Node.js, Express.js

Frontend: React.js, Redux, React Query, Tailwind CSS, HTML5, CSS3

Databases: MySQL, PostgreSQL, MongoDB, Redis

Tools and Technologies: Git, GitHub, Postman, Kafka

Cloud & DevOps: AWS (EC2, S3, IAM, Load Balancer, Route 53), Docker, CI/CD

AI Integration: LLMs, Retrieval-Augmented Generation (RAG), Embeddings (OpenAI APIs)

PROJECTS

CollabBoard — Real-Time Collaboration & Task Management Platform

- Built a full-stack **real-time collaboration** platform with workspaces, boards, tasks, comments, and chat for team-based productivity.
- Designed and developed secure REST APIs using **Node.js** and **Express.js** with **JWT-based authentication** and role-based access control (**RBAC**)
- Implemented real-time features using **WebSockets** for live updates across tasks, comments, chat, and notifications
- Architected an **event-driven** notification and activity tracking system using **Kafka** for asynchronous processing of user actions
- Integrated **Redis** for **caching** and **rate limiting**, improving API performance and handling high concurrency efficiently
- Developed **AI-powered** task description generation using **LLM APIs** to automate and enhance user productivity
- Implemented **Razorpay** payment integration for **subscription-based AI features** and premium access
- Designed file upload system using **AWS S3** and deployed backend on **AWS EC2** with **Dockerized** services
- Hosted frontend on **Vercel** with **CI/CD integration** for seamless deployments
- Implemented **unit and integration testing** along with API testing using **Postman** to ensure system reliability

GoTasky — Location-Aware Smart Errand & Mobility Assistant

- Built a location-aware smart assistant to help users manage real-world errands with contextual reminders based on time and proximity
- Developed RESTful backend using **TypeScript**, **Node.js** and Express.js with **JWT-based authentication** and secure user profile management
- Implemented **real-time location tracking** using browser **Geolocation API** and GPS coordinates for continuous user position updates
- Designed proximity detection engine using **distance-based algorithms** to trigger **intelligent alerts** in real time
- Built real-time notification system using **WebSockets** to deliver instant alerts when users enter defined location radius zones
- Developed **map-based interface** for visualizing and interacting with location-tagged tasks and user movement
- Implemented **AI-based optimization** to intelligently group nearby errands and suggest efficient execution order
- Used **Redis** for **caching** location and user session data to improve performance of frequent geo-queries
- Built responsive frontend using **React.js** and **Tailwind CSS** for interactive location dashboard experience

CERTIFICATIONS AND PUBLICATIONS

- (2021 IJAEM, IRJET) Effective Computer Vision Techniques for Real-Time Hand Gesture Recognition and Detection | [Certificate](#)

Professional Development

- Completed structured full-stack development training at Sharpner Tech, strengthening backend expertise while building strong frontend capabilities using React.js and modern UI practices
- Built and deployed **production-grade full-stack applications** during upskilling phase using Node.js, React.js, Kafka, Redis, WebSockets, and AWS
- Strengthened understanding of **system design** and **problem-solving (DSA)** through practical application in real-world projects

I took time off from December 2022 - Present. I took this time off as a result of health and personal reasons. On the other hand, I have fully regained my fitness where necessary, and now I am fully able to carry out my duties with motivation, a fresh mind and new ideas. During this time off I enhanced my skill set by learning, implementing projects and polishing my existing skillsets in order to stay current with the latest technological trends that are sure to facilitate the organization's success.
